PRODUCT DATA SHEET BARA CLAY GRANULATE 2-6

Bara Clay granulate 2-6 is used as an additive in peat- and coco based growthmedium to increase the clay mineral content for horticultural production in flowers, treesand shrubs. 2-6 has high cat-and anion exchange capacity and acts as a nutrient buffer for nutrients. 2-6 accelerates the absorption of water and disclosure of the water in the substrate. Bara Clay granulate 2-6 consists of high quality 3-layer mineral Swedish Plateau Clay. Plateau Clay is formed during the last ice age in Scandinavia and is thus geologically a young clay. The clay is thus free from contaminates such as heavy metals, sodium, chloride and dioxins.

The product is mine locally with minimal environmental impact and carbon emissions. Bara Clay granulate 2-6 meets national environmental law requirements and is approved for use in accordance with EU regulations for organic production. Bara Clay granulate 0-2-6 is certified by RHP.
